

# It's Easy To Be Green!

Protecting and sustaining the environment for the generations to come is a huge priority as well as a responsibility. Many of the products offered throughout the catalog are created with this in mind. The green leaf symbol identifies these eco-friendly choices.

To show our dedication to being green, we have chosen to print this catalog with that responsibility in mind. We chose a carbon-neutral printer and requested this catalog be printed with soy ink on paper containing post-consumer recycled content. In addition, we have chosen to use windpower, an eco-friendly energy source, to produce this catalog.

*Recycled Cotton Bags are tough enough to be used over and over again. They can be easily thrown over the shoulder and can go anywhere! (pg 5)*

*Envisions Packaging with its "living hinge" makes it ideal for reuse. This high-gauge, 100% polypropylene product tolerates being opened & closed numerous times. Made in the USA. (pg 20-21)*

## Reuse

Reusing products whenever possible is even better than recycling them because the item does not need to be reprocessed before it can be used again. The true definition of a reusable item is something that withstands normal wear and can be reused many, many times.

## Renewable Resources

This is the holy grail of conservationists. Any material that can be quickly regrown or replenished after harvest or use is a renewable resource. Identifying and using these resources, and reducing our dependence on non-renewable resources, is key to long-term sustainability.

*Bamboo is a fast-growing, hollow-stemmed grass with a scrappy nature. It regenerates itself (no replanting required), needs few or no pesticides or fertilizers, and can be harvested every 3-5 years. The material comes from a species of bamboo that pandas don't eat - so there's no risk of harvesting their dinner for your bag. (pg 7)*

## Biodegradable

These materials will eventually decompose and be reabsorbed by the environment. Paper & Tissue are the most common packaging products that are biodegradable.

## Recycled

Recycling involves taking a used item and reprocessing it into something else. New products are made of two main kinds of recycled content: PCR (Post Consumer Use materials) and PIR (Post Industrial materials such as scraps and trimmings). Many of our products fall into this category - look for the green leaf symbol throughout the catalog!

*Espresso and Natural Kraft Manhattan Bags contain 80% recycled material. All other colors contain 30%. (pg 7)*

*100% Recycled! Brown Kraft Shopping Bags contain 95% PCR and 5% PIR. (pg 4 & 13)*

*Eco Mod Bags contain 80% recycled material. (pg 10)*

*100% Recycled! The brown kraft paper used in manufacturing the corrugate for these boxes is made of 95% PCR and 5% PIR material. All boxes have brown kraft interiors and fluting. (pg 53-59)*

## Repurpose

To take what may be otherwise a waste item and use it for another purpose.

*Metal tins can be repurposed for many uses. Storing photos, collecting crayons and pens, and organizing scrapbook supplies are just a few ideas. The options are endless! (pg 26)*

# Rainforest Collection
